

AMENDMENTS

In the Specification:

Amend the Abstract of the Disclosure as follows:

ABSTRACT OF THE DISCLOSURE

A network probe terminal for ~~tracking~~ surveillance of a network communication line and simulating a browser activity of a given terminal is disclosed. The probe terminal monitors TCP/IP data packets ~~rooted~~ routed through the communication line ~~for filtering and filters~~ relevant requests and responses relating to a given IP address. These requests and responses are analyzed and sorted according to their type and content, ~~based~~ Based on the analysis, the probe terminal identifies all relevant data transactions relating to the navigation process of ~~the a~~ given terminal. The probe terminal activates a virtual browser simulating the processing of identified data transactions to create navigation presentations similar to the ~~real~~ navigation presentations as seen by the user of ~~the a~~ given terminal.
